Working Group: Resilient Water Futures (HELPING WG 2.10)

Methods, Tools, and Practices for Climate Adaptation

Resilient Water Futures: Methods, Tools and Practices for Climate Adaptation

Our focus

Rooted in the Mediterranean, we **tackle climate adaptation for water-related risks and extremes**. Our working group produces globally accessible, evidence-based resources designed to enhance water system resilience and advance global water security.

What we will deliver

- A **public inventory & typology** of climate adaptation methods, tools, and practices – classified by sector, scale, user, accessibility.
- A **framework** to classify and critically assess tools and practices, supporting better decisions and helping prevent maladaptation.
- A **repository of case studies** – including both successes and failures – on climate adaptation in water systems.

How we work

- **Maintain a systematic living inventory** of existing tools & practices (adapt-tools.org).
- **Co-develop a typology & assessment framework** with researchers, practitioners, and policymakers.
- **Analyze real world case-studies** of climate adaptation to water related risk and extremes.
- **Facilitate knowledge exchange** through workshops, webinars, and joint publications.
