PARTICIPATION REPORT

Between November 12 and 20, 2021, I was granted the IAHS SYSTA scholarship to participate in the 4th International Conference of the Great African Basins in Cotonou, Benin. This trip was marked by three main activities:

1) Training in hydrometry

It took place over three days (November 13-15, 2021). A field trip on the Mono river allowed us to put into practice the different gauging methods.

2) The conference

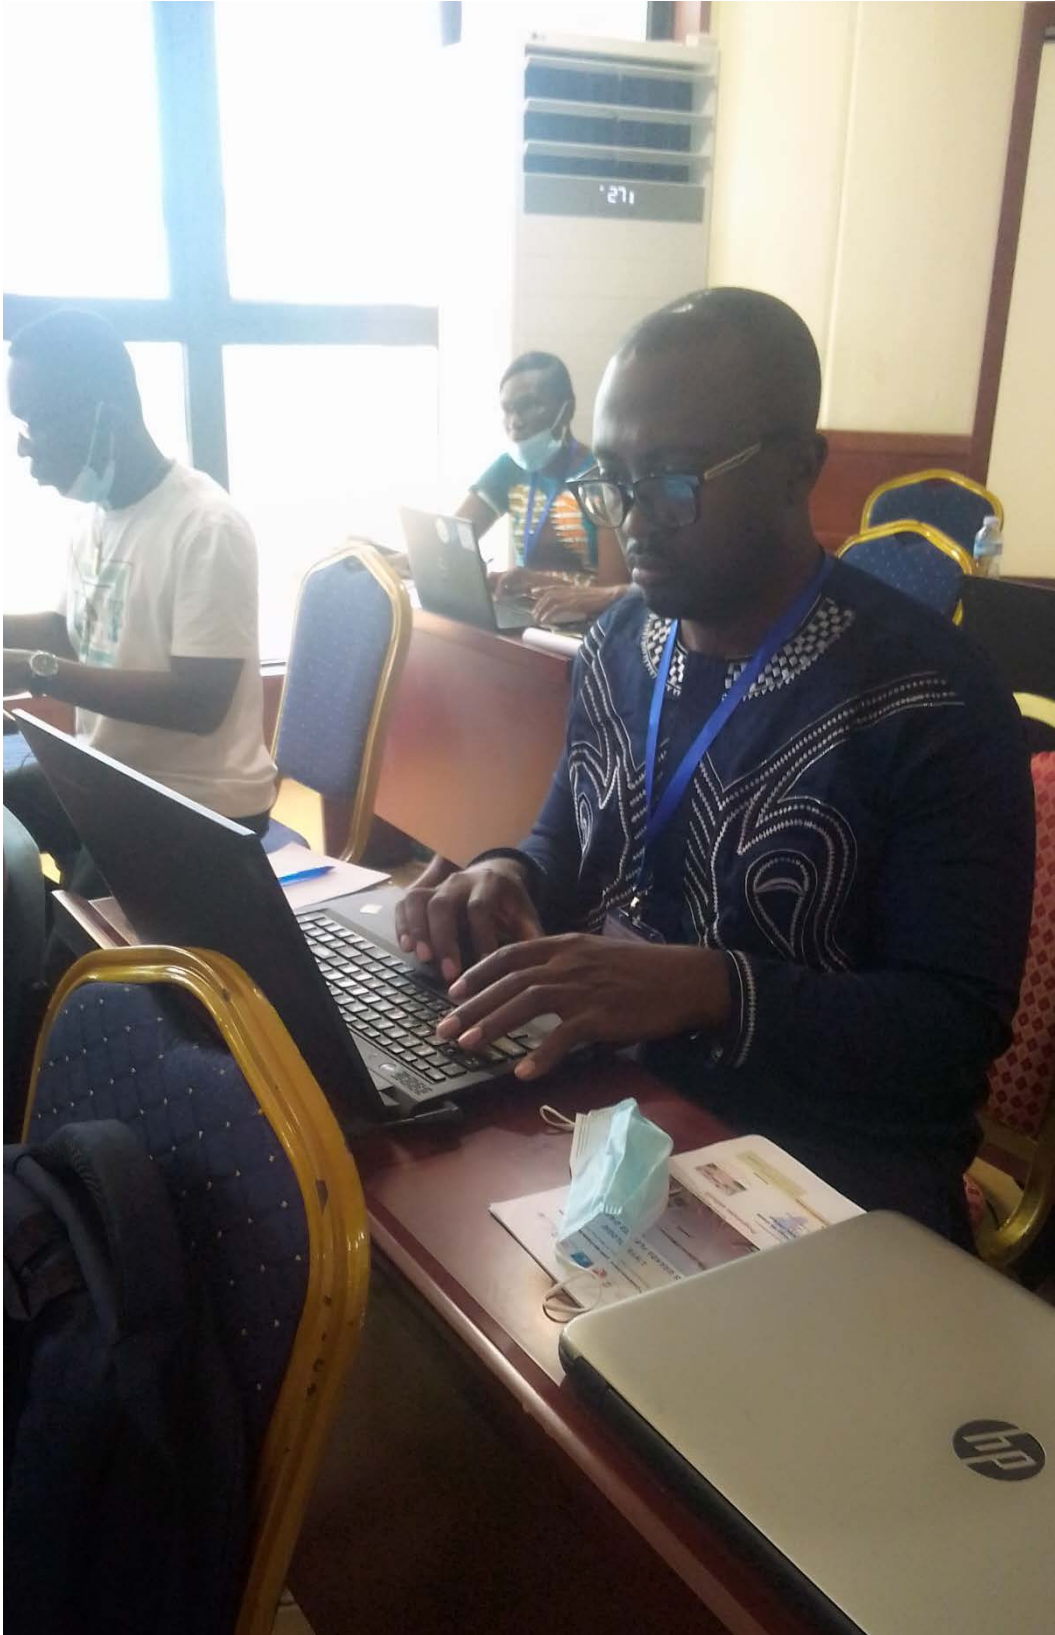

It also covered three days (November 16-18, 2021). During the conference, I presented my paper; I was rapporteur of one panel and I also attended two workshops of the young hydrologist.

3) Training in hydrological modeling and spatial hydrology

It took place between November 19-20, 2021. It was essentially a question of discovering the AIR model with the airGR and airGRteaching packages in the first part and the use of radar images in hydrology as second part.

ACKNOWLEDGMENT

I express my deep gratitude to the International Association of Hydrological Sciences (IAHS) which fully funded my participation through the SYSTA scholarship.
