

STAHY workshop 2021 is the first virtual international conference I will be attending as regards my career development. I was thrilled by the level of organization and the kind of researches showcased at the workshop. My personal experience can be summarized thus:

The workshop really exposed me to the recent trend of research studies in hydrology and climate science in general. I was mainly captivated by the quality and the standard of studies presented during the conference. The conference though virtual was highly interactive and very enlightening. Personally, I was able to learn recent methodologies on climate variability, data, modelling and etc. Though, I was not able to network with other researchers, however, I got a first-hand experience from the question and answer section which was highly interactive.

On a lighter mood, I really had difficulty getting connected to all the conference proceedings due to many distractions and internet fluctuations.

I also want to use this opportunity to specially appreciate IAHS for awarding me with SYSTA travel grant which allowed my participation in the just concluded STAHY 2021 workshop.

Akinwale Temitope Ogunrinde (PhD) (Nigeria)
