

Conference Report

XIth IAHS Scientific Assembly, Montpellier, France

(29th May to 3rd June 2022)

Zahra Abdollahi

Soil Conservation and Watershed Management Research Department, Zanjan Agricultural and Natural Resources Research and Education Center, AREEO, Zanjan, Iran

Date: 05/08/2022

The XIth IAHS Scientific Assembly I attended covered various topics on Hydrology. Since my research is focused on river quality and pollutants in freshwater ecosystems, this conference provided a full opportunity for inspirational and constructive discussions. This conference also acted as a platform to enhance a constructive dialogue on my research. The poster I presented at the conference with the title of “The Effect of Hydrological Drought on Water Quality in Zanjanrud River” has been allocated in the “emerging contaminants and legacy pollutants in freshwater ecosystems (S26)” section and I was presenting it on Thursday, 2 June 2022. I was also attending other scientific programs and special sessions from Monday, 29 May to Friday, 3 June. During the time of IAHS2022, I had some inspirational discussions on social Hydrology with prof. Murugesu Sivapalan which was such a great opportunity. Also, I had this opportunity to participate fully in discussions with hydrology-related researchers and to share findings and views during poster sections, coffee breaks, and the Gala dinner. As a result, I have met many academics and professionals from different countries who have similar research interests. Finally, I would like to thank SYSTA award for funding the expense of attending the conference. This conference broadens my knowledge and experience. Also, many thanks should go to Dr. Claire Lupton for her full support.

Abstract: [The Effect of Hydrological Drought on Water Quality in Zanjanrud River.](#)

[Zahra Abdollahi, Ataollah Kavian, Seyed Hamid Reza Sadeghi](#)

Session S2: [Floods: Processes, Forecasts, Probabilities, Impact Assessments and Management](#)
