

Participation in The XIth Scientific Assembly of the International Association of Hydrological Sciences (IAHS 2022) in Montpellier (France) from 29 May to 3 June 2022 by Nesrine Abid.

I have the honor of participating in the international conference with an oral presentation. This conference allowed me to make new professional relationships in the field of hydrology. The various presentations and works presented gave me further ideas and reflections on other works that could be applied in my country.

I participated in two workshops:

1. Applications of satellite remote sensing in hydrological assessments
2. Rainfall-runoff modeling with the open-source airGR and airGRteaching R packages

I really appreciated the quality of the training I had.

I want to thank SYSTA for the opportunity to participate in such a rich and important conference.

Abstract: [Comparison of Actual Evapotranspiration assessment by satellite-based models \(SEBS/ LSA SAF\) and hydrological modeling \(BBH\). Nesrine Abid, Zoubeida Bargaoui and Chris M. Mannaerts.](#)

Session S13 [Recent and future satellite missions for observation of the continental water cycle.](#)
