

## SYSTA Award report

Mohammad Merheb

I had the pleasure to be one of the SYSTA awardees at the IAHS 2022 General Assembly in Montpellier. This award was particularly special since it allowed me to participate in my first in-person conference after the Covid-19 pandemic. Moreover, the conference venue meant a lot to me. Indeed, I have done my PhD thesis in Montpellier, and revisiting this amazing city was something I was looking forward to. In addition, participating in the IAHS General Assembly allowed me to get in touch with the international hydrologists community. It helped establish new connections and rekindle old ones. Furthermore, thanks to the award I was able to present my ongoing research and to attend many thoughts' provoking presentations and discussions. I was also introduced to new emerging ideas and research avenues in hydrology and related fields. I am deeply grateful to the award committee for this amazing opportunity.

Abstract: [Water resources in Lebanon: an overview. M. Merheb et al.](#)

Session S21: [Hydrology of Mediterranean and semi-arid regions](#)
