

SYSTA AWARD REPORT 2023: IAHS AT THE IUGG – Katelyn Johnson

Attending the Panta Rhei Symposium and IAHS at the IUGG Assembly was a wonderful and rewarding experience, for which I am truly grateful. It was a great pleasure to meet my fellow awardees and academics from other developing countries. Engaging with them was refreshing as we shared common experiences and challenges in our academic journeys, even though we are from different countries. Our meeting has opened the door of opportunity for future collaborations.

I was fortunate to meet the editors of the Hydrological Sciences Journal. I received positive feedback from them on my research and this was reaffirming for me that the research I do is relevant and important.

I attended the various scientific sessions and gained an understanding of the international standard of research in my field. I learnt a great deal from attending the numerous Early Career Scientist Events and I acquired skills and resources that will benefit my academic career.
