Contents

Foreword by Jeffrey J. McDonnell vii
Preface by Laurent Pfister & Hubert H. G. Savenije ix

1 INTRODUCTION 1
1.1 Leonardo Da Vinci 3
1.2 Hydrology before and after Leonardo 6

2 LEONARDO’S ‘TREATISE ON WATER’ 11
2.1 Leonardo and the “science of water” 13
2.2 Leonardo’s unfinished “Treatise on Water” 15
2.3 The conceptual foundations of Leonardo’s “Treatise on Water” 18

3 THE ATMOSPHERE 25
3.1 Structure, constituents and processes 27
3.2 Meteorological phenomena 28
3.3 Measuring devices 31

4 THE PHYSICAL STRUCTURE OF THE EARTH 35
4.1 The earth as a support for the water cycle 37
4.2 The earth as a living body 37
4.3 The structure of the earth 39
4.4 Water as a force eroding and shaping the earth’s surface 41
4.5 The role of sedimentation in the building of landforms 45
4.6 Leonardo’s concept of erosion and the forces shaping the earth’s surface, as opposed to the biblical deluge theory 47
4.7 Erosion as a constant remodelling force of the earth’s surface under the effect of tectonics 49

5 THE WATER CYCLE 51
5.1 The general framework for Leonardo’s concept of the water cycle 53
5.2 Leonardo’s key questions related to the water cycle 54
5.3 Leonardo’s concept of the water cycle 55
  5.3.1 The idea of drainage basins 55
  5.3.2 The hydrological cycle 56
  5.3.3 Leonardo’s thoughts on ‘where does the water go when it rains?’ and ‘what flow path does it take to the stream?’ 59
  5.3.4 The water cycle: salinity of the sea water 63
  5.3.5 Leonardo: the first experimental hydrologist? 63
  5.3.6 On the origin of tides and the link with Leonardo’s theory of the hydrological cycle 68

6 THE STUDY OF WATER IN MOTION 71
  6.1 Leonardo’s motivation for studying moving waters 73
  6.2 Training rivers, or how to raise the economic value of rivers 75

7 LEONARDO’S LEGACY 85
