Preface by <i>Fiona J. Dyer, Martin C. Thoms & Jon M. Olley</i>	v
1 ECO-GEOMORPHOLOGY: linking the physical form of fluvial sedimentary systems with ecological response	
Flume experiments and modelling of flow–sediment–vegetation interactions <i>C. S. James, A. A. Jordanova & C. R. Nicolson</i>	3
Associations between channel morphology and large woody debris in a lowland river <i>Victor Hughes & Martin C. Thoms</i>	11
Connectivity and fragmentation of flood plain–river exchanges in a semiarid, anabranching river system <i>Heather M. McGinness, Martin C. Thoms & Mark R. Southwell</i>	19
Organic carbon supply to a large lowland river and implications for aquatic ecosystems <i>Jon M. Olley</i>	27
Techniques to quantify the variability of thalweg profiles <i>Rebecca Bartley & Ian Rutherford</i>	35
Development of a method to assess ecological impact due to hydrological regime alteration of Scottish rivers <i>Andrew R. Black, Olivia M. Bragg, Robert W. Duck & John S. Rowan</i>	45
Predicting channel type from catchment and hydrological variables <i>William J. Young, Ralph W. Ogden, Andrew O. Hughes & Ian P. Prosser</i>	53
Hydraulic habitat in confluences: an ecological perspective on confluence hydraulics <i>Catherine A. Franks, Stephen P. Rice & Paul J. Wood</i>	61
Evaluation of small rivers by combining biological sampling with a structure analysis of river beds <i>Christian Vogt & Wolfhard Symader</i>	69
Physical and ecological associations in dryland refugia: waterholes of the Cooper Creek, Australia <i>Louisa Davis, Martin C. Thoms, Christine Fellows & Stuart Bunn</i>	77
Restoration of dynamic flood plain topography and riparian vegetation establishment through engineered levee breaching <i>Jeffrey F. Mount, Joan L. Florsheim & Wendy B. Trowbridge</i>	85
Topographical change and sediment transport after habitat improvement in the Pankenai River, Japan <i>Yoshimasa Kurashige</i>	93
The impact of reservoir regulation on the processes of erosion and sedimentation of the delta in Lake Øyeren, Norway <i>Jim Bogen & Truls E. Bønsnes</i>	103
Eco-geomorphology: an interdisciplinary approach to river science <i>Martin C. Thoms & Melissa Parsons</i>	113
Linking the physical form and processes of rivers with ecological response (keynote paper) <i>Henry R. Hudson</i>	121

2 FLOOD PLAINS: the role of temporary storage in the exchange of sediment and nutrients

- Heavy metal mining and flood plain response in the upper Clyde basin, Scotland
John S. Rowan & Stewart W. Franks 143
- Effective discharge for heavy metal deposition on the lower River Rhine flood plains
Hans Middelkoop, Ivo Thonon & Marcel van der Perk 151
- Sediment-associated mercury distribution within a major Amazon tributary: century-scale contamination history and importance of flood plain accumulation
Laurence Maurice-Bourgoin, Rolf Aalto & Jean Loup Guyot 161
- Quantifying sediment sources in lowlying sugarcane land: a sediment budget approach
Fleur Visser, Christian H. Roth, Robert J. Wasson & Ian P. Prosser 169
- Late Holocene flood plain development following a cataclysmic flood
Wayne D. Erskine & Carmel T. Peacock 177
- Channel and flood plain response to reforestation in the Dragonja basin, southwestern Slovenia: linking past and present
S. D. Keesstra 185
- What happens when flood plains wet themselves: vegetation response to inundation on the lower Balonne flood plain
Neil C. Sims & Martin C. Thoms 195
- Flood-driven formation and destruction of a forested flood plain and in-channel benches on a bedrock-confined stream: Wheeny Creek, southeast Australia
Ashley A. Webb, Wayne D. Erskine & Deirdre Dragovich 203
- Reconstructing historic floods using sediments from embanked flood plains: a case study of the River Tay in Scotland
Janis L. Paine, John S. Rowan & Alan Werritty 211
- An improved method for evaluation of sediment loads for river management
Piero De Bonis, Grazia Fattoruso, Sergio Grauso, Filippo Onori & Andrea Pagano 219
- Flood plain contribution to open channel flow structure
Paul A. Carling, Zhixian Cao & D. A. Ervine 227
- Land-use options for the flood plains of the northeastern region of India
U. C. Sharma 239
- Assessing the hydrological changes to flood plain wetland inundation caused by river regulation
Fiona J. Dyer 245
- Channel flood plain linkages on the Kam Tin River, Hong Kong
Mervyn R. Peart & Hermes Wong 255
- Storage of sediment and nutrients in littoral zones of a shallow tropical reservoir: a case of Timah Tasoh Reservoir, Perlis, Malaysia
Wan Ruslan Ismail, Khairul R. Abu-Bakar, Zullyadini A. Rahaman, Norhidayat Kamaruzzaman, Ahyaudin B. Ali & Mashhor Mansor 263
- Emerging issues in flood plain research (keynote paper)
Gerald C. Nanson & Jacky C. Croke 271

3 VARIABILITY: magnitude and frequency controlling sedimentary systems

- Hydrological response of Ngarradj—a seasonal stream in the wet–dry tropics, Northern Territory, Australia
D. R. Moliere, G. S. Boggs, K. G. Evans & M. J. Saynor 281

Magnitude–frequency analysis of suspended sediment loads in the subtropical Richmond River basin, northern New South Wales, Australia <i>Lester J. McKee, Shahadat Hossain & Bradley D. Eyre</i>	289
Discharge magnitude and frequency as a control on proglacial fluvial sedimentary systems <i>Philip M. Marren, Andrew J. Russell & Óskar Knudsen</i>	297
The role of hydrograph shape in controlling glacier outburst flood (jökulhlaup) sedimentation <i>E. Lucy Rushmer, Andrew J. Russell, Fiona S. Tweed, Óskar Knudsen & Philip M. Marren</i>	305
Suspended sediment concentrations and the geomorphic effect of sub-bankfull flow in a central Australian stream <i>Mary C. Bourke</i>	315
Sediment and organic matter transfer following bushfires in the Blue Mountains, Australia <i>Deirdre Dragovich & Rowena Morris</i>	325
Changes in chemical characteristics of river bed samples caused by exceptional high floods in the Kartelbornsbach basin near Trier <i>Wolfhard Symader & Margret Roth</i>	333
Fluvial transport of sediment across a pristine tropical foreland basin: channel–flood plain interaction and episodic flood plain deposition <i>Rolf Aalto, Thomas Dunne, Charles A. Nittrouer, Laurence Maurice-Bourgoin & David R. Montgomery</i>	339
Temporal–spatial variations in the sediment delivery ratio of small drainage basins: the Russian Plain example <i>Valentin Golosov</i>	345
Magnitude and frequency controlling fluvial sedimentary systems: issues, contributions and challenges (keynote paper) <i>Evan S. J. Dollar</i>	355

4 TECHNIQUES: new approaches in the study of fluvial sedimentary systems

Sediment budgets and self-organization in a cellular landscape model <i>Dirk H. De Boer & Khawaja Faran Ali</i>	365
New views of the morphodynamics of large braided rivers from high-resolution topographic surveys and time-lapse video <i>D. Murray Hicks, Maurice J. Duncan, Jeremy M. Walsh, Richard M. Westaway & Stuart N. Lane</i>	373
Assessment of the hydraulic roughness of river flood plains using laser altimetry <i>Nathalie E. M. Asselman, Hans Middelkoop, Maaïke R. Ritzen & Menno W. Straatsma</i>	381
Assessment of historic flood plain sedimentation rates along the River Meuse in The Netherlands using ¹³⁷ Cs dating with PHAROS <i>Marjolein van Wijngaarden, Catherine Rigollet & Rob J. De Meijer</i>	389
Sediment movement on steep slopes to the Mekong River: an application of remote sensing <i>Avijit Gupta & Chen Ping</i>	399
The role of flood plain sedimentation in catchment sediment and contaminant budgets <i>D. E. Walling & P. N. Owens</i>	407
Iffezheim field test—three years experience with a petrographic tracer <i>Emil Gözl</i>	417

Estimating residence times of fine sediment in river channels using fallout ^{210}Pb <i>Peter Wallbrink, Jon M. Olley & Gary Hancock</i>	425
The possible role of agricultural land drains in sediment delivery to a small reservoir, Worcestershire, UK: a multiparameter fingerprint study <i>I. D. L. Foster,</i> <i>J. A. Lees, A. R. Jones, A. S. Chapman, S. E. Turner & R. Hodgkinson</i>	433
Quantitative sediment fingerprinting using a Bayesian uncertainty estimation framework <i>Ingrid F. Small, John S. Rowan & Stewart W. Franks</i>	443
Using multivariate statistical techniques to interpret patterns of flood plain sedimentation <i>John M. Foster, Martin C. Thoms & Melissa Parsons</i>	451
A critical reflection of computational fluid dynamics applications to fluvial sedimentary systems <i>Zhixian Cao & Paul A. Carling</i>	463
Sediment budgets, dynamics, and variability: new approaches and techniques (keynote paper) <i>Robert J. Wasson</i>	471
Key word index	479
