Preface by <i>Wolfgang Summer</i>	v
1 General Aspects of Modelling Soil Erosion, Sediment Transport and Relevant Hydrological Processes	
Surface erosion, sediment transport, and reservoir sedimentation <i>Chih Ted Yang, Timothy J. Randle & Shiang-Kueen Hsu</i>	3
The linkage between hydrological processes and sediment transport at river basin scale <i>V. Krysanova, A. Becker & B. Klöcking</i>	13
A framework for modelling erosion and sediment transport in a large drainage basin <i>Timothy R. Green, Anthony J. Jakeman, Li Zhang, Sara G. Beavis & Claude R. Dietrich</i>	21
2 Soil Erosion Modelling and Related Models	
Developments in physically-based overland flow modelling <i>Wolfgang Summer</i>	33
Rill erosion on a sandy soil: preliminary field experiment and quasi-3D numerical simulation <i>Stefano Ferraris, Giuseppe Carra, Claudio Gallo & Gianmarco Manzini</i>	45
A self-organizing dynamic systems approach to hillslope rill initiation and growth: model development and validation <i>David Favis-Mortlock, Tony Guerra & John Boardman</i>	53
Factors influencing the velocity–discharge relationship in rills <i>I. Takken, G. Govers, C. A. A. Ciesiolka, D. M. Silburn & R. J. Loch</i>	63
Freeze–thaw effects on vehicular ruts and natural rills: importance to soil-erosion and terrain modelling <i>Lawrence W. Gatto</i>	71
Multi-scale Green’s function Monte Carlo approach to erosion modelling and its application to land-use optimization <i>Lubos Mitas & Helena Mitasova</i>	81
Experiments on sediment deposition by overland flow <i>L. Beuselinck, G. Govers, A. Steegen & P. B. Hairsine</i>	91
An Optical Spectro Pluviometer for the measurement of raindrop properties <i>Christian Salles & Jean Poesen</i>	97
A mathematical model of water movement through porous media <i>Yuriy Denisov, Alexey Sergeev, German Bezborodov & Yuriy Bezborodov</i>	103
Numerical modelling of air flow over complex terrain concerning wind erosion <i>Mingyuan Du, Peiming Wu, Taichi Maki & Shigeto Kawashima</i>	111
Simulating soil erosion and phosphorus transport on loess soils using advanced hydrological and erosional models <i>Kai Gerlinger & Ulrike Scherer</i>	119
Modelling badlands erosion with SHETRAN at Draix, southeast France <i>James C. Bathurst, Ben Lukey, Justin Sheffield, Robert A. Hiley & Nicolle Mathys</i>	129
Comparison between two mathematical models for the computation of sediment yield from a basin <i>Vlassios Hrissanthou</i>	137

A site-specific systems-approach model for soil erosion and silt yield studies for hilly watershed management <i>J. Adinarayana, K. Gopal Rao, N. Rama Krishna, P. Venkatachalam & J. K. Suri</i>	143
Application of formulae of transporting flow capacity for the computation of suspended sediment in the Lena River <i>Nelly N. Bobrovitskaya & Claudia M. Zubkova</i>	149
A physically-based sediment delivery model for arid regions <i>K. D. Sharma</i>	157
Modelling suspended sediment supply to the River Rhine drainage network; a methodological study <i>Paul M. van Dijk & Frans J. P. M. Kwaad</i>	165
Variations in sediment yield from an agricultural drainage basin in central Belgium <i>An Steegen, Gerard Govers, Laurent Beuselinck, Jeroen Nachtergaele, Ingrid Takken & Jean Poesen</i>	177
Flooding of properties and sedimentation in retention ponds in central Belgium <i>Gert Verstraeten & Jean Poesen</i>	187
Simulating long-term erosion effects on soil productivity for central Switzerland using the EPIC model <i>Daniel Schaub, Stefan Meier-Zielinski & Renan U. Goetz</i>	195
Runoff modelling in northern Algeria using a distributed physically-based model integrating remote sensing data <i>Stefan Belz, Leila Beldjoudi & Salah Lahlah</i>	203
Runoff and soil loss from bench terraces in upland West Java, Indonesia and implications for process modelling <i>L. A. Bruijnzeel, B. van Eijk & Edi Purwanto</i>	211
Hydrological processes and sediment yield on devastated slopes in JiangXi Province, China <i>Akitsu Kimoto, Taro Uchida, Nobuhito Ohte, Takahisa Mizuyama & Li Changhua</i>	221
3 Assessment of Erosion Processes, Model Validation and Project Evaluation	
Influence of the moisture-tension parameter on sedigraphs and hydrographs from a semiarid region in Brazil <i>Celso Augusto Guimarães Santos, Masahiro Watanabe, Koichi Suzuki & Vajapeyam S. Srinivasan</i>	231
Assessment of suspended load trapped in a small reservoir related to the erosion in a loess basin <i>Tadeusz Bednarczyk & Marek Madeyski</i>	241
Assessment of erosion and some implications for model validation <i>Bent Hasholt</i>	249
Radio-ecological risk assessment (RRA) provided by databases of radioisotope pollution of Ukrainian water bodies <i>Victor M. Samoylenko & Yuriy S. Tavrov</i>	261
Use of fallout ¹³⁷ Cs measurements for validating and calibrating soil erosion and sediment delivery models <i>D. E. Walling & Q. He</i>	267
Analysis of river morphological and environmental changes with the integration of historical data and image processing <i>Lidija Globevnik</i>	279
Evaluation of the impacts of projects to reduce human-induced soil losses in watersheds <i>Charles L. Abernethy & C. M. Wijayaratna</i>	287
4 Sediment Transport in Mountain Streams	
Numerical sediment transport models—theoretical and practical aspects <i>Helmut M. Habersack</i>	299

Sediment transport and erosion in mountain streams <i>Katinka Koll & Andreas Dittrich</i>	309
Short-time relations between runoff and bed load transport in a steep mountain torrent <i>Christoph Hegg & Dieter Rickenmann</i>	317
Initial design of a model for Himalayan river sediments <i>Richard Johnson, Rachel Bronsdon & Robert Collins</i>	325
Model for estimating gully morphology <i>Aleksey Sidorchuk & Anna Sidorchuk</i>	333
Development of AYT gravel bed-load sampler and method for bed-load measurement <i>Xiaoqing Yang & Huanjing Gao</i>	345

5 Analysis of Suspended Sediment Transport Characteristics

Sediment transport analysed by energy derived concepts <i>Wolfgang Summer & Wei Zhang</i>	355
The effects of inaccurate input parameters on the modelling of deposition of suspended sediment <i>Markus Maurer, Youcef Kelanemer & Wilhelm Bechteler</i>	363
Sediment transport functions and their evaluation using data from large alluvial rivers of Bangladesh <i>M. Monowar Hossain & M. Lutfur Rahman</i>	375
Characterization of sediment transport and storage in the upstream portion of the Fraser River (British Columbia, Canada) <i>Ellen L. Petticrew & Simon L. Biickert</i>	383
Contribution à l'étude du transport solide en Algérie du nord <i>Mohamed Meddi, Abdelkader Khaldi & Hind Meddi</i>	393
The use of relative celerities of bed forms to compute sediment transport in the Paraná River <i>Carlos Vionnet, Clelia Marti, Mario Amsler & Leticia Rodriguez</i>	399
Transport characteristics of tile drain sediment in clay loam soils <i>M. Stone & B. G. Krishnappan</i>	407
Process-based estimation of suspended-sediment concentration during the thaw season in a small headwater basin <i>Yoshimasa Kurashige</i>	415
The particle bound contaminant transport during low flow conditions in a small heterogeneous basin <i>Thomas Udelhoven, Wolfhard Symader & Reinhard Bierl</i>	423
Suspended sediment structure: implications for sediment and contaminant transport modelling <i>I. G. Droppo, D. E. Walling & E. D. Ongley</i>	437
Spatial and temporal variability in fractal dimensions of suspended solids in two southern Ontario rivers <i>Dirk H. de Boer & Mike Stone</i>	445
