Preface by Dawen Yang, Fuqiang Tian, Lihua Tang & Zhiyu Liu

1 Process studies

- Evaporation paradox in the Yellow River Basin, China *Zhentao Cong, Dawen Yang, Fubao Sun & Guangheng Ni* 3
- Evaluating the advection-aridity model of evaporation using data from field-sized surfaces of HEIFE *Songjun Han, Heping Hu & Fuqiang Tian* 9
- An improved analytical approach to estimate *in situ* biodegradation rates *Yuan Liu & Xiaofeng Wu* 15
- Estimating unsaturated soil hydraulic parameters using a generalized Richards equation *Haishen Lü, Yonghua Zhu & Zhongbo Yu* 22
- Computation of grid storage capacity from topographic index in hydrological modelling *Peng Shi, Xiaofang Rui, Simin Qu & Xi Chen* 28
- A tracer experiment and numerical simulation of potential nitrogen pollution from agricultural fertilization *Lihua Tang, Sicong Zhang & Xiufen Sun* 33
- Assessing the effects of different cropping patterns on drainage capability of the southern riverine basin *Fengyan Wu & Tiesong Hu* 41
- Possible impact of aerosols on orographic precipitation in eastern China *Hanbo Yang, Dawen Yang, Pingyun Li & Yafei Wang* 48
- Estimating dry matter content for winter wheat using MODIS reflectance data *Yonghong Yi, Dawen Yang & Daoyi Chen* 54

2 Modelling approach

- A large-scale routing scheme for stream simulation and its application to river basins in China *Feng Chen & Zhenghui Xie* 65
- Investigation of organized hydrological heterogeneity from a spatial analysis perspective *Hongyi Li & Murugesu Sivapalan* 73
- Appropriate contributing area threshold of a digital river network extracted from DEM for hydrological simulation *Li Li, Jiahu Wang & Zhenchun Hao* 80

A statistically-based runoff-yield model <i>Zhongmin Liang, Jun Wang, Yang Lei & Ye Shi</i>	88
Uncertainty estimation for the Xin'anjiang model parameters <i>Fanggui Liu, Xiaofang Rui, Hehai Xie, Jie Feng & Jiyu Yu</i>	95
Generation of triangulated irregular networks for distributed hydrological modelling <i>Guangheng Ni, Lei Wang, Fuqiang Tian & Heping Hu</i>	102
Scale and resolution effects of topographic index by 2-D continuous wavelet transform <i>Dingbao Wang & Ximing Cai</i>	108
A long-term runoff forecast model based on association rules of data mining <i>Fuqiang Wang & Shiguo Xu</i>	115
A macro-scale hydrological model based on a spatial averaging approach: model structure and an application <i>Zhiyong Yang, Heping Hu & Fuqiang Tian</i>	121
Assessment of hydrological model structure based on parameter identifiability <i>Hongli Zhao, Xiaoliu Yang & Yunzhong Jiang</i>	129
Uncertainty of the box-counting method for estimating the fractal dimension of river networks <i>Miao Zhou, Fuqiang Tian & Heping Hu</i>	137

3 Applications

A variable fuzzy-sets assessment model and its application to regional water resources assessment <i>Shouyu Chen, Chunling Chai & Min Li</i>	147
Implementation of subgrid-scale spatial variability of parameters in a regional climate-hydrology coupled model <i>Xing Chen, Zhongbo Yu, Yong Huang, Guangbai Cui, Liliang Ren & Xi Chen</i>	153
Impacts of climate change on hydrological processes and water resources in the headwater area of the Yellow River <i>Hui Gao, Yangwen Jia, Cunwen Niu, Yaqin Qiu & Hao Wang</i>	161
Ecological water resources requirement of the Ningxia natural oasis using the groundwater level variation amplitude method <i>Xiaorong Huang, Xinhai Zhang & Caiwang Zhai</i>	171
Mapping the average annual runoff depth in Huangshui watershed using DEM <i>Shaofeng Jia, Shijun Lin & Yajun Wang</i>	178
2-D hybrid approach to storm flood modelling in the Shalan catchment <i>Chong Li, Jikang Lu & Baisheng Ye</i>	186
The uncertainty analysis of the wetted perimeter method via axis scaling for setting minimum ecological in-stream flow requirements <i>Suxia Liu, Xingguo Mo, Jun Xia, Changming Liu & Lina Ji</i>	193

Temporal and spatial variations of $\delta^{18}\text{O}$ along the main stem of the Yangtze River, China <i>Baohong Lu, Tingting Sun, Chunyan Wang, Su Dai, Jian Kuang & Jiyang Wang</i>	199
Genetic algorithm based combined evaluation model for regional water security evaluation: a case study <i>Fang Tong & Zengchuan Dong</i>	205
Comparing univariate ARMA and ARFIMA model for forecasting daily streamflows <i>Wen Wang, Xi Chen, Jun Ma & Shiqing Huo</i>	213
Effects of land use changes on hydrological responses of the Mekong River <i>Shan Xie, Tianqi Ao, Lingling Wu & Wei Feng</i>	220
Analysis of water resources variability in the Yellow River of China using a distributed hydrological model <i>Dawen Yang & Weiwei Shao</i>	228
Application of the grey self-memory neural network model for annual runoff forecasting <i>Xiaowei Zhang, Lingmei Huang & Bing Shen</i>	234
Study on countermeasures for water resources shortage and changes of ecological environment in Shiyang River basin <i>Yongming Zhang, Jun Jiang, Bing Shen & Qingling Shen</i>	239
Determination of root-zone water storage in a desert woodland using a two-layer moisture balance model <i>Yonghua Zhu, Liliang Ren, Haishen Lü & T. H. Skaggs</i>	246
Impact of climate change on the streamflow in the headwater catchment of the Yellow River basin <i>Fangfang Zhao, Zongxue Xu & Junxiong Huang</i>	252
Key word index	261
